London Law Firm

SITUATION

International Law Firms face increasing pressure to safeguard sensitive client data. A major international practice, based in London needed to process, manage and retain vital information that was vulnerable to theft, compromise & loss through both unintentional and deliberate actions.

TASK

Make security recommendations to international standards adopted by the world's police and military forces.

RESULT

On budget within a full security envelope.

ACTION

- Full Business Impact Analysis appraisal
- Identification of vulnerabilities:
 - theft, compromise, loss
 - unintentional or via deliberate action
 - at the workplace, homes and off-site locations
- Devised, designed and implemented technical and procedural control measures
- Devised an international encryption system for global file transfer
- Compliance against ISO 27001:2005 security standards (Information Security Management System).

“SA Group were impeccable in ring fencing and handling incredibly sensitive data relating to both clients and individuals within the firm. Their pedigree, knowledge and experience in international military and government environments delivered real tangible benefits. It provided real insight into the vulnerabilities within modern business ranging from the complexity of international transactions to something as simple as a memory stick being left in the office. No business should overlook the protection of vital business information.”
